

CLAIM

1. What we as joint inventors claim is that use of the protective covering known as "I C WRAP" will provide a sanitary cover to aid in the prevention of the spread of viruses and bacteria among persons sharing medical, physical therapy and physical equipment, devices and accessories by:

allowing everyday usage of medical, physical therapy and physical exercise equipment by multiple users. The I C WRAP is composed of a cohesive coated laminated non-porous Polyethylene plastic foam pad, non-latex rubber material that is produced with a non-slip, removable restickable self-adhesive surface on the equipment-contacting side and a non-slip sanitary surface on the patient-contact surface. The protective covers for use with or without being provided in a roll of covers that have perforations at predetermined spaced intervals that allow the user to tear off one or more sections to achieve a cover of a desired size or in flat sheets;

use of I C WRAP in rolls or sheet sections is easily pulled from a container or box allowing the self-adhesive side of the cover to be placed over the selected surface of the equipment to which the cover adheres on contact providing a sanitary non-grip cover to the shared surface.
